

## TESTIMONY

Our organisation stands for quality and service to the medical patients we serve from all over the country in our facility in Oradea. Some of the stages during our prosthetic manufacturing process inevitably requires the patient to wait.

Therefore the conditions in our waiting room and reception area needs to reflect our policy of treating our patients at a high level of comfort and professionalism.

One such a service naturally includes providing drinking water. During the summer months we previously used large containers of water. Many times we faced delayed delivery which embarrassingly left us and therefore our patients without water.

After installing the water purifying system from Laguna-Aqua, we have experienced a more cost effective, permanent solution which has never let us down.

Needless to say, the quality of the water we all drink today at our headquarters has significantly improved.

I would recommend the team from Laguna-Aqua and their water solution to anybody who is considering making -what has proven for us- to be a wise investment.
